Configuration

Configure basic features

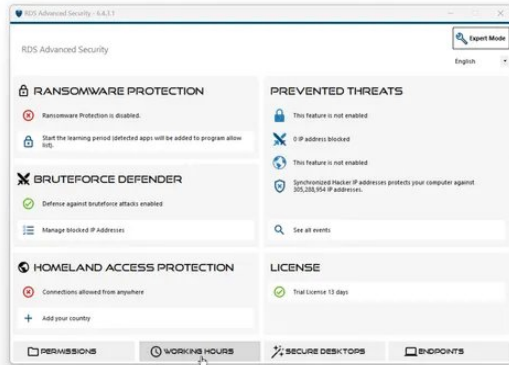

After launching RDS-Advanced Security, easily configure the main security features using the lite mode on the top right corner.

1. Activate **Ransomware Protection** in one click to start the learning period.
2. Confirm that **Bruteforce Defender** is indeed activated.
3. Add your whitelisted countries in **Homeland Access**

Protection.

You are all set with basic features!

Leverage user/group-based security features

Now that your basic features are activated, customize the following security measures for customization at the user or group levels.

Add users and groups

Click on one of the **Secure Desktop**, **Permission** or **Working Hours** features, to easily add users and groups using your Windows Active Directory, Azure, AWS or local accounts.

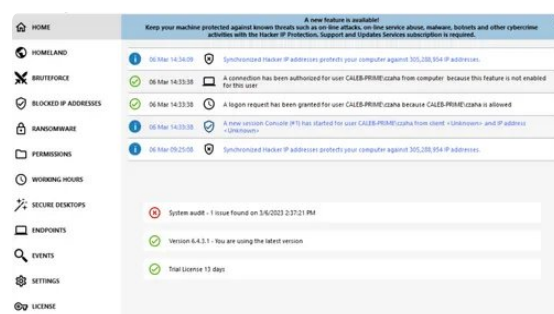

Configure additional features

- Define access privileges to local filesystems, printers and registry keys for each user/group with **Permissions**.
- Define when users are authorized to login with **Working Hours**.
- Customize the security level for users/groups with **Secure Desktop**.
- Validate users' devices that can connect remotely with **Endpoint Protection**.

To access more capabilities, please use the **expert mode**.
To whitelist users, groups or programs, click on the **settings** tab.

Access advanced settings

In the expert mode, experienced network admins can access advanced settings in Settings / Advanced.

Backup/Restore data and settings in a secure and private database, deactivate the Windows firewall to use the RDS-Advanced Security built-in firewall, enable/disable service and functionalities logs, and more!
